Product & Analytics | Computer Science & Industrial Engineering Student

## SUMMARY

Final-year Computer Science & Industrial Engineering double major working where data meets product decisions: understanding how people use a product, measuring it, and turning the findings into changes a team can ship. Hands-on experience in product management, data analysis, and machine learning. Interested in game product, data science, business analytics, and fintech.

## EDUCATION

|                                                                       |                             |
|-----------------------------------------------------------------------|-----------------------------|
| <b>Sabancı University</b> , Istanbul, Turkey                          | 2023 – June 2027 (Expected) |
| Double Major: Computer Science & Engineering   Industrial Engineering | GPA: 3.63/4.00              |
| <b>Karlsruhe Institute of Technology (KIT)</b> , Karlsruhe, Germany   | Apr – Oct 2026              |
| Erasmus+ Exchange Student – Computer Science & Industrial Engineering |                             |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Digital Engineer</b> – Henkel (Gebze Plant)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Oct 2026 – Present  |
| <ul style="list-style-type: none"><li>Collect, analyze, and report machine and test-equipment data; present data-driven insights to international teams and support factory-level digital initiatives.</li></ul>                                                                                                                                                                                                                                                                                                                                         |                     |
| <b>Software Engineering Intern → Scholar</b> – TÜBİTAK BİLGEM (MA3 Cryptography)                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Aug 2025 – Apr 2026 |
| <ul style="list-style-type: none"><li>Took ownership of a recurring team pain point: built an automated report generation tool that cut report-writing time from 1-2 hours to minutes; then proposed a more advanced solution that the team adopted.</li><li>Integrated backend services and PKI libraries across OS environments; contributed to MPC protocols and secure communication frameworks in C++ (RSA, ECC).</li><li>Turned a complex technical process into clear, client-ready documentation.</li></ul>                                      |                     |
| <b>Product Management Intern</b> – Mükellef (Workhy)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Jun – Aug 2025      |
| <ul style="list-style-type: none"><li>Redesigned onboarding (company formation) flows for USA, UK, and Turkey; wrote PRDs aligning legal, design, and engineering across 3 markets.</li><li>Identified a key friction point in the user journey (repeated back-and-forth for missing information) and designed a structured intake flow that collects everything upfront, shortening internal operation time.</li><li>Ran user tests on internal interfaces and shipped improvements based on feedback; built Robomotion automation workflows.</li></ul> |                     |
| <b>Intern</b> – DenizBank (DenizAkademi)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Mar – Apr 2024      |
| <ul style="list-style-type: none"><li>Rotational training across digital banking operations, data analysis, marketing, and HR.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                 |                     |

## PROJECTS

- Airbnb Host Rating Prediction** (KIT – Data Science for Business, team of 5) *Python, LightGBM, XGBoost, CatBoost, SHAP* – Framed a business question (what drives host ratings?) and built ML models on ~11,000 Berlin listings using listing, noise-map, and review-sentiment data. Led evaluation: an ablation study showed review-sentiment features cut prediction error by ~21%, and SHAP analysis identified cleanliness, comfort, and host as the top drivers, turned into coaching advice. [GitHub](#)
- Air Pollution & Mental Health** *Python, ML* – Statistical and ML-based analysis of the relationship between pollution metrics and mental health indicators. [GitHub](#)
- Beauty Product Database & Management System** *MySQL, MongoDB, PHP* – Full-stack web app with user profiles, reviews, trigger-based allergen warnings, stored-procedure reports, and a MongoDB support-ticket system.

## LEADERSHIP

|                                                                                                                                                                          |                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Coordinator, PR Team</b> – Industrial Engineering Club                                                                                                                | 2024 – Present  |
| <ul style="list-style-type: none"><li>Led marketing and logistics for campus events and case-study sessions with industry guests such as BCG and Simon-Kucher.</li></ul> |                 |
| <b>Ambassador</b> – SUCOOL (Startup Company League)                                                                                                                      | 2024 – Jun 2025 |
| <ul style="list-style-type: none"><li>Organized innovation-focused events connecting 50+ startups with industry mentors and investors.</li></ul>                         |                 |

## SKILLS

**Analytics & Data:** Statistical Analysis · Machine Learning (Scikit-learn, LightGBM, XGBoost) · Feature-Impact & Ablation Analysis · SQL · Data Reporting

**Product:** Product Management · PRD Writing · User Flow Design · User Testing & Feedback Loops · Agile · Cross-functional Collaboration

**Programming:** Python · C++ · Java · JavaScript · PHP · SQL

**Tools:** Git · Linux · MySQL · MongoDB · Robomotion

**Languages:** Turkish (Native) · English (Fluent)

## HONORS & AWARDS

Sabancı University Merit Scholarship · YKS University Entrance Exam – Top 633 nationally
